

ABSTRACT OF THE DISCLOSURE

FIRE-RESISTANT POLYAMIDE COMPOSITION

5 The invention relates to a fire-resistant composition
containing at least one star polyamide and a flame
retardancy system comprising a phosphinate and a
melamine reaction product. The inventive composition
can be used to produce elements having a low flame-
10 spread rating upon combustion as well as satisfactory
mechanical properties. Said composition is particularly
suitable for producing moulded elements that are used
in the field of electrical and electronic connector
technology.
